IN PURSUIT OF PERFECTION

VIVEKANANDA INSTITUTE OF PROFESSIONAL STUDIES - TECHNICAL CAMPUS

Grade A++ Accredited Institution by NAAC

NBA Accredited for MCA Programme; Recognized under Section 2(f) by UGC;
Affiliated to GGSIP University, Delhi; Recognized by Bar Council of India and AICTE
An ISO 9001:2015 Certified Institution

SCHOOL OF ENGINEERING & TECHNOLOGY

BTECH Programme: AI – ML (A)

Course Title: Mobile Application Development Lab

Course Code: AIML308P

Submitted By:

Name: Kunsh Sabharwal
Enrolment No: 01117711623

VISION OF INSTITUTE

To be an educational institute that empowers the field of engineering to build a sustainable future by providing quality education with innovative practices that supports people, planet and profit.

MISSION OF INSTITUTE

To groom the future engineers by providing value-based education and awakening students' curiosity, nurturing creativity and building capabilities to enable them to make significant contributions to the world.

S. No.	Experiment	Date	Marks (Total Ten) which includes (Laboratory Assessment, Class participation and Viva)	Remarks	Updated Marks	Faculty Signature
1	Hello World Application: Create a basic "Hello World" application for a mobile platform of your choice (Android or iOS) using the respective development environment.					
1.1	To design and develop a basic Mobile Application and insert an image in the application interface using appropriate layout and UI components.					
1.2	To design and develop a mobile application interface by inserting and implementing different types of buttons (Elevated , Text, Outlined) using appropriate UI components.					
1.3	To design and develop a mobile application interface by inserting and displaying different icons using appropriate UI components and resources.					

2.	To design and develop a Portfolio Mobile Application that showcases personal details such as profile information, skills, education, projects, achievements, and contact details using an attractive and user-friendly interface in Android.					
3.	To design and develop an interactive “Tap the Ball” game application in Android using Android SDK.					
4.	Implement data storage functionality in your mobile application using local storage options like shared preferences.					
5.	Implement user authentication and authorization features in your mobile application, allowing users to register, log in, and access personalized content.					

6.	Integrate sensors such as accelerometer, gyroscope, or GPS into your mobile application to capture & utilize sensor data.					
7.	Add multimedia functionality to your mobile application, such as capturing photos/videos, playing audio files, or integrating with social media sharing.					
8.	Incorporate push notifications into your mobile application, enabling the delivery of real-time alerts or messages to users.					
9.	Develop a mobile application that interacts with a RESTful API to fetch and display data from a remote server.					
10.	Develop a mobile application that utilizes location services to provide location - based information, such as finding nearby places or tracking user movements.					

11.	Mobile App Testing and Debugging: Learn and apply various testing techniques, including unit testing, integration testing, and debugging, to ensure the quality and stability of your mobile application.
